

#### Sense of Belonging in Family

A new study in the Journal of Family Issues explains that a sense of belonging increases offspring wellbeing, especially in two-biological-parent families.

## Feelings of Rejection and <u>Divorce</u>

According to a qualitative assessment, children of broken homes report feelings of betrayal, rejection and abandonment. In turn, feelings of alienation are associated with higher depression, delinquent behavior, and poor academic

### Family Structure and Parent-Child Relationships

A Chinese <u>study</u> shows the other end of the spectrum: Adolescents in non-intact families report lower family functioning and parent—child relationships compared to adolescents in intact families.

### Family Structure and Parental Engagement

Children in married biological families experience greater economic resources and parental engagement than children in single-mother, mother and cohabitating

#### **BLOG: The Power of Stories for MARRI**

Social Science data does not produce a warm and fuzzy feeling. It is quite cerebral. At times this causes me some significant professional problems. Now is one of those times.

We at MARRI have a number of donors looking at our work. They like it, but they are not sure of its impact. So, I am coming to you to ask for a favor: Not a donation of money, but something likely much more valuable to me right now: A story. I ask you for a story (or two) about MARRI data: How it affects you, how you have

used it. Have you had others take a look at it? Use your own experience in simple terms. It can be as long or short as you wish.

You have no idea how important your story might be for us. Please help by sending your story to: marri.research@gmail.com
