The Brain Develops Differently in the Two Sexes

A 2016 Philadelphia Neurodevelopmental Cohort study of 10,000 youths (8 through 21) found that sex differences in brain organization emerged during adolescence, and became more pronounced during young adulthood. Females outperformed males from childhood onward in accuracy and speed across all

three measures of social cognition (identification of and differentiation between emotions, and age differentiation).

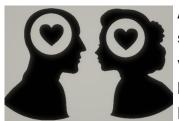

<u>Differences in Brain Development Indicate Complementarity</u> <u>Between the Sexes</u>

A <u>2017 literature review of brain and behavior</u> found consistent sexual differences in neurocognitive performance, with females doing better on memory and social cognition, and males on spatial processing and motor speed. Sex differences were also prominent on

all major brain parameters, including higher rates of cerebral blood flow in females vs. higher glucose metabolism in males. It concludes these differences indicate a complementarity between the sexes that would result in higher adaptive diversity.

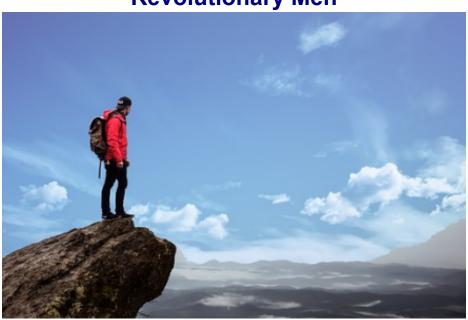

<u>Sexual Differences Shape Brain Structure and Skew Sex</u> <u>Ratios of Neuropsychiatric Conditions</u>

A <u>2014 meta-analysis</u> of sex differences in brain structure found sustained differences in overall brain volume between men and women. On average, males have larger absolute brain volumes than females. Brain-region sex differences in volume and tissue

density are found in the amygdala, hippocampus, and insula, areas which are known to be implicated in sex-based neuropsychiatric differences in autism, depression, schizophrenia, and ADHD.

Revolutionary Men

The marriage between a man and a woman is the single most important human relationship. Period. Many have dismissed it, others treat is as optional, and some have attacked and weakened it. For more than half of American-17-year-olds the marriage of their parents does not exist. They pay the price and so will their children! This absence of marriage is the greatest threat to our freedoms. *Continue Reading...*
